Teacher's Guide: Crazy Shapes Activity

Below are examples of how a student might successfully get the marble to follow each path.

Possible solution for zig-zag shape: (two quick puffs of air, as shown)

- Puff #1: Strong puff here, in direction of arrow (though an angled force can also work)
- Puff #2: Strong puff here, in direction of arrow (though an angled force can also work)

Possible solution #1: L-shape

- Multiple puffs of air directly opposite the marble's motion to cause it to slow down and eventually stop at Point A

Possible solution #2: L-shape

- A single strong puff of air (at elbow of L shape) angled in just the right direction
