

SCAMPER Step	Questions to think about	How will you do this to your airmobile?
Substitute	What can you substitute in your design to improve your vehicle's ability to move along the counter?	
Combine	What items can you put together to improve an aspect of your vehicle's performance?	
Adapt	Think about your vehicle design and consider how you could adapt parts of it to improve its movement. How can you alter it to make it move faster, farther, or smoother after seeing the problems it encountered during your trial run?	
Modify	How could you change part or all of your vehicle design? What if you modified the way your vehicle receives the air that powers it?	
Put to other purposes	Think about your vehicle and design and consider how you could put this to use for another purpose. What else could you use this design for? How could it help in today's world? (Could this be used for a real vehicle? For environmental purposes? For wind power?)	

Eliminate	What if you completely removed a part of your design? What would happen to your vehicle then?	
Rearrange/Reverse	What if part of your design process was reversed or done in a different order? How could that alter your design and affect the outcome?
