MS-LS3 Heredity: Inheritance and Variation of Traits			
Students who demonstrate understanding can:			
MS-LS3-1. Develop and use a model to describe why structural changes to genes (mutations) located on chromosomes may			
affect proteins and may result in harmful, beneficial, or neutral effects to the structure and function of the			
<b>organism.</b> [Clarification Statement: Emphasis is on conceptual understanding that changes in genetic material may result in making different proteins.] [Assessment Boundary: Assessment does not include specific changes at the molecular level, mechanisms for protein synthesis, or specific types of mutations.]			
MS-LS3-2. Develop and use a model to describe why asexual reproduction results in offspring with identical genetic			
information and sexual reproduction results in offspring with genetic variation. [Clarification Statement: Emphasis is on using			
mormation and sexual reproduction results in onspring with genetic variation. [Clarification Statement: Emphasis is on using models such as Punnett squares, diagrams, and simulations to describe the cause and effect relationship of gene transmission from parent(s) to offspring and			
resulting genetic variation.]			
The performance expectations above were developed using the following elements from the NRC document A Framework for K-12 Science Education:			
Science and	Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
-			
Developing and Using Models		LS1.B: Growth and Development of Organisms	Cause and Effect
Modeling in 6–8 builds on K–5 experiences and progresses to developing, using, and revising models		<ul> <li>Organisms reproduce, either sexually or asexually, and transfer their genetic information to their offspring. (secondary to MS-</li> </ul>	<ul> <li>Cause and effect relationships may be used to predict phenomena in natural systems. (MS-LS3-</li> </ul>
to describe, test, and predict more abstract		LS3-2)	2)
phenomena and design systems.		LS3.A: Inheritance of Traits	Structure and Function
<ul> <li>Develop and use a model to describe phenomena.</li> </ul>		<ul> <li>Genes are located in the chromosomes of cells, with each</li> </ul>	<ul> <li>Complex and microscopic structures and systems</li> </ul>
(MS-LS3-1),(MS	S-LS3-2)	chromosome pair containing two variants of each of many	can be visualized, modeled, and used to describe
		distinct genes. Each distinct gene chiefly controls the production	how their function depends on the shapes,
		of specific proteins, which in turn affects the traits of the individual. Changes (mutations) to genes can result in changes	composition, and relationships among its parts, therefore complex natural and designed
		to proteins, which can affect the structures and functions of the	structures/systems can be analyzed to determine
		organism and thereby change traits. (MS-LS3-1)	how they function. (MS-LS3-1)
		<ul> <li>Variations of inherited traits between parent and offspring arise</li> </ul>	
		from genetic differences that result from the subset of	
		chromosomes (and therefore genes) inherited. (MS-LS3-2)	
		LS3.B: Variation of Traits	
		<ul> <li>In sexually reproducing organisms, each parent contributes half of the genes acquired (at random) by the offspring. Individuals</li> </ul>	
		have two of each chromosome and hence two alleles of each	
		gene, one acquired from each parent. These versions may be	
		identical or may differ from each other. (MS-LS3-2)	
		<ul> <li>In addition to variations that arise from sexual reproduction,</li> </ul>	
		genetic information can be altered because of mutations.	
		Though rare, mutations may result in changes to the structure and function of proteins. Some changes are beneficial, others	
		harmful, and some neutral to the organism. (MS-LS3-1)	
Connections to other DCIs in this grade-band: MS.LS1.A (MS-LS3-1)			
Articulation across g	grade-bands: 3.LS3.A (MS-LS3-1),(N	IS-LS3-2); 3.LS3.B (MS-LS3-1),(MS-LS3-2); HS.LS1.A (MS-LS3-1); HS.	LS1.B (MS-LS3-1),(MS-LS3-2); HS.LS3.A (MS-LS3-
	LS3-B (MS-LS3-1),(MS-LS3-2)		
ELA/Literacy -	e Standards Connections:		
<b>RST.6-8.1</b> Cite specific textual evidence to support analysis of science and technical texts. <i>(MS-LS3-1),(MS-LS3-2)</i>			
RST.6-8.4	Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context relevant		
	to grades 6-8 texts and topics. (A		
RST.6-8.7		l information expressed in words in a text with a version of that informati	on expressed visually (e.g., in a flowchart, diagram,
	model, graph, or table). (MS-LS3-1),(MS-LS3-2)		
SL.8.5	Include multimedia components and visual displays in presentations to clarify claims and findings and emphasize salient points. (MS-LS3-1),(MS-LS3-2)		
Mathematics -			
MP.4	Model with mathematics. (MS-LS3-2)		
6.SP.B.5	Summarize numerical data sets in relation to their context. (MS-LS3-2)
