

Welcome to the Family Math & Science Night. As you and your family "take flight" on your adventure to explore birds this evening, bring this passport book to the stations in the "Bird's Nest" (gym). Work together to complete the questions as you journey around the room.

The names of the activity stations to visit around the room are listed in the pages that follow. When you think you've answered the question, tell your bird guide at the table and get stamped!

Later you will explore even more in the Aviary (cafetorium).

Explore and discover bird adaptations in the "Bird's Nest"!

- Feathers
- Wing Span
- Feeding Frenzy
- Wing Flapping

Adaptations are physical body parts or behaviors that animals are born with and are important for their survival.

ACTIVITY: Feathers

I can explain three reasons birds need feathers to survive!
