

Two-liter pop bottle birdfeeders!

1. Remove all the labels and stickers from the soda bottle.
2. Wash and dry the bottle.
3. The bottom of the bottle will be top of the feeder.
4. Drill two small holes in the bottom of the bottle. Thread wire through one hole and out the other. Twist the ends of the wire together to make a loop for hanging the feeder. Use a small piece of duct tape or caulk to seal the holes so rain cannot get into the feeder.
5. Using a drill, make $\frac{5}{16}$ " holes that are on opposite sides of the bottle. Insert 8" - 9" by $\frac{5}{16}$ " dowels into the pairs of holes.
6. Repeat the above step to make several more perches.
7. If you want a thistle (niger) seed feeder, make $\frac{1}{4}$ " by $\frac{1}{8}$ " slots $1\frac{1}{2}$ " above the perches.
8. If you want a sunflower seed feeder, make $\frac{5}{15}$ " holes $1\frac{1}{2}$ " - 2" above the perches.
