

The Lorax Wrap-up Sheet.

Using the “Words of the Lifted Lorax”

1. Make a list of items that you use that are made of wood.

2. Where does the wood used to create the items come from and how do you think it is harvested?

3. Would you consider trees to be classified as renewable or non-renewable?

4. Explain in your own words what a renewable resource is and give one real life example.

5. Explain in your own words what a non-renewable resource is and give one real life example.

6. If the Lorax had asked for your advice after chopping the first Truffula Tree, how would you recommend he go about utilizing this resource in a better way?

7. Choose a real world resource that is non-renewable. Create an advertisement poster describing ways people can extend the life of the resource and/or suggest ways alternative resources could be used in the same way.
