

## River Bed Set Up Directions

1. Take a large sheet pan that is also about three inches deep.
2. On the bottom of the pan, press clay into the pan to form the first layer. The clay should be about one-half inch deep.
3. Cover the clay with a small pebbles such as fish tank gravel to represent the bedrock layer.
4. The third layer should be soil. Compact the soil down as much as possible to represent the topsoil layer of the land.
5. Create a river path that gently winds from the one edge of the tray to the bottom edge of the tray. Carve the path through all three layers.
