Connecting to the *Next Generation Science Standards* (NGSS Lead States 2013):
The chart below makes one set of connections between the instruction outlined in this article and the NGSS. Other valid connections are likely; however, space restrictions prevent us from listing all possibilities. The materials, lessons, and activities outlined in the article are just one step toward reaching the performance expectation listed below.

<table>
<thead>

**Performance Expectation**

2-ESS2-1. Compare multiple solutions designed to slow or prevent wind or water from changing the shape of the land.*

**Science and Engineering Practices**

<table>
<thead>
<tr>
<th>Constructing Explanations and Designing Solutions</th>
<th>Use observations from photographs and Google Maps to construct an evidence-based account of wind and water’s effect on earth’s surface and different solutions humans use to slow wind or water from changing the shape of the land.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Compare the results of modeled sea walls, sandbags, and dune grass barriers to determine which solution is best at slowing the erosion of a model coastline.</td>
</tr>
<tr>
<td></td>
<td>Plant dune grass as a solution to the real life erosion of the local coastline.</td>
</tr>
<tr>
<td>Developing and Using</td>
<td>Students distinguish between models and the actual sea</td>
</tr>
<tr>
<td>Models</td>
<td></td>
</tr>
<tr>
<td>--------</td>
