### Investigation Log

**Investigation 14**

**Movement of Water: Why Can We See the Roots of Trees That Grow Near Rivers or Streams?**

**Introduction**

Trees can be found all over the world. A tree is a plant with a trunk made of wood. The trunk of a tree supports branches that hold leaves above the ground. A tree also has roots. The roots of a tree anchor it to the ground. The roots also make it possible for the tree to collect water and nutrients from the soil around it. Your teacher will have you look at some pictures of trees. Keep track of what you observe when you look at these trees and what you are wondering about as you look at them in the boxes below.

<table>
<thead>
<tr>
<th>Things I OBSERVED …</th>
<th>Things I WONDER about …</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
We usually cannot see the roots of trees because they are underground. However, some of the trees that you looked at have roots that you can see. These trees grow near a body of water such as a lake, river, or stream. Trees need water to survive, and the amount of water available at a particular location determines how many and what types of trees are found at that location.

The water found in lakes, rivers, and streams comes from rain and snow. The amount of rain or snow that falls in an area determines the size of the lakes, rivers, and streams in the area. When there is a lot of rain or snow, lakes, rivers, and streams will fill with water and grow bigger and deeper. When there is very little rain or snow, the lakes, rivers, and streams in the area will shrink in size and may even disappear. Water moving in a river or stream can also break rocks and soils into smaller pieces and move the smaller pieces from one place to another. Water can therefore change the appearance of the land in a region.

In this investigation, your goal is to figure out why we often see the roots of trees that are found growing near a river or stream. You will need to create a physical model of a river with trees along it for this investigation. Your teacher will show you how to create your model using a stream table, sand, some pipe cleaners, and water. You can then use your physical model to test out your different ideas about what you think happens to the trees that grow near rivers and streams.
Investigation 14. Movement of Water: Why Can We See the Roots of Trees That Grow Near Rivers or Streams?

Your Task
Use what you know about the movement of water over land, how water can move things around, and cause-and-effect relationships to design and carry out an investigation to determine how the movement of water in a river or stream (a cause) affects the soil around a tree (an effect).

The guiding question of this investigation is, Why can we see the roots of trees that grow near rivers or streams?

Materials
You may use any of the following materials during your investigation:

- Safety glasses or goggles (required)
- Plant tray
- Small block of wood
- 10 pipe cleaners
- Funnel pitcher
- Rulers
- Stopwatch
- 1 cm grid transparency
- Wet-erase markers
- Water
- Sand

Safety Rules
Follow all normal safety rules. In addition, be sure to follow these rules:

- Wear sanitized safety glasses or goggles during setup, investigation activity, and cleanup.
- Do not throw pipe cleaners or sand, and do not put these materials in your mouth.
- Immediately clean up any spills to avoid a slip or fall hazard.
- Wash your hands with soap and water when you are done collecting the data.

Plan Your Investigation
Prepare a plan for your investigation by filling out the chart that follows; this plan is called an investigation proposal. Before you start developing your plan, be sure to discuss the following questions with the other members of your group:

- What might cause the appearance of the trees near rivers or streams to change?
- How can we measure a change over time?
Our guiding question:

This is a picture of how we will set up the equipment:

We will collect the following data:

These are the steps we will follow to collect data:

I approve of this investigation proposal.

__________________________  ________________________
Teacher’s signature          Date
Collect Your Data

Keep a record of what you measure or observe during your investigation in the space below.

Analyze Your Data

You will need to analyze the data you collected before you can develop an answer to the guiding question. To do this, create a graph that shows the relationship between the cause and the effect.
Draft Argument

Develop an argument on a whiteboard. It should include the following:

- **A claim**: Your answer to the guiding question.
- **Evidence**: An analysis of the data and an explanation of what the analysis means.
- **A justification of the evidence**: Why your group thinks the evidence is important.

<table>
<thead>
<tr>
<th>The Guiding Question:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Our Claim:</td>
</tr>
<tr>
<td>Our Evidence:</td>
</tr>
<tr>
<td>Our Justification of the Evidence:</td>
</tr>
</tbody>
</table>

Argumentation Session

Share your argument with your classmates. Be sure to ask them how to make your draft argument better. Keep track of their suggestions in the space below.

Ways to IMPROVE our argument …
Draft Report

Prepare an investigation report to share what you have learned. Use the information in this handout and your group’s final argument to write a draft of your investigation report.

Introduction

We have been studying ________________________________ in class. Before we started this investigation, we explored ______________________________________________________________________

Investigation 14. Movement of Water

The picture below shows a creek and the land around the creek. The squares in the creek are 30 cm on each side. Use this information to answer questions 1–3.

1. Which picture below (A or B) shows the least amount of soil erosion along the banks of this creek? Circle your choice.

   ![Diagram A]

   ![Diagram B]

2. Which picture below (A or B) shows what the creek would look like after several days of heavy rain? Circle your choice.

   ![Diagram A]

   ![Diagram B]
3. Explain your thinking. What *cause-and-effect relationship* from your investigation did you use to answer these questions?

Are you interested in using argument-driven inquiry (ADI) for elementary instruction but just aren't sure how to do it? You aren't alone. *Argument-Driven Inquiry in Fourth-Grade Science* will provide you with both the information and instructional materials you need to start using this method right away. The book is a one-stop source of expertise, advice, and investigations. It's designed to help your fourth graders work the way scientists do while integrating literacy and math at the same time.

The *Student Workbook for Argument-Driven Inquiry in Fourth-Grade Science* has all the student materials you need to guide your students through these investigations. It provides lab details, safety information, and handouts to get your students ready to start investigating. It presents a well-organized series of 15 field-tested investigations designed to be much more authentic for instruction than traditional activities. The investigations cover energy, waves and their application in technologies for information transfer, molecules and organisms, and Earth’s place in the universe and systems. Students can investigate questions such as these: How does the energy of a moving object change after a collision? How can you make an electric car move faster? And why do big waves block the entrance to some New Zealand harbors?

The *Student Workbook* is part of NSTA's best-selling series about ADI in middle school and high school science. Like its predecessors, this collection is designed to be easy to use. The lessons also support the Next Generation Science Standards and the Common Core State Standards for English language arts and mathematics. The book can also help emerging bilingual students meet the English Language Proficiency Standards.

Many of today's elementary school teachers—like you—want new ways to engage students in scientific practices and help students learn more from classroom activities. *Argument-Driven Inquiry in Fourth-Grade Science*, with its accompanying *Student Workbook*, does all of this while giving students the chance to practice reading, writing, speaking, and using mathematics in the context of science.
